

Amendments to the Claims

Listing of Claims

The following Listing of Claims replaces all prior versions and listings of claims in the application.

1. (currently amended) A composition comprising:
 - (a) a drug in a pharmaceutically acceptable solubility-improved form that is a crystalline highly soluble salt form other than the crystalline hydrochloride salt; and
 - (b) a concentration-enhancing polymer selected from the group consisting of cellulose acetate phthalate, cellulose acetate trimellitate, hydroxypropyl methyl cellulose phthalate, and hydroxypropyl methyl cellulose acetate succinate

wherein

said drug alone has an aqueous solubility of ~~less than~~ up to about 1 to 2 mg/mL;
when said drug is basic, said solubility-improved form has an aqueous solubility of at least two-fold the solubility of the more soluble of the crystalline hydrochloride salt and the crystalline free base drug form; and

said composition is not a dispersion and said drug and said polymer are present as particles in a dry physical mixture.

2. (original) The composition of claim 1 wherein said drug in said solubility-improved form is a crystalline highly soluble salt form of said drug.

3-28 (cancelled)

29. (original) The composition of claim 1 wherein said drug is selected from antihypertensives, antianxiety agents, anticlotting agents, anticonvulsants, blood glucose-

lowering agents, decongestants, antihistamines, antitussives, antineoplastics, beta blockers, anti-inflammatories, antipsychotic agents, cognitive enhancers, cholesterol-reducing agents, antiobesity agents, autoimmune disorder agents, anti-impotence agents, antibacterial and antifungal agents, hypnotic agents, anti-Parkinsonism agents, anti-Alzheimer's disease agents, antibiotics, anti-depressants, and antiviral agents.

30-155 (cancelled)

156. (previously presented) The composition of claim 1, wherein said drug is ziprasidone.

157-163 (cancelled)

164. (currently amended) A composition comprising:

- (a) a drug in a crystalline highly soluble salt form other than the crystalline hydrochloride salt; and
- (b) hydroxypropyl methyl cellulose acetate succinate

wherein

said composition is not a dispersion;

said drug alone has an aqueous solubility ~~less than~~ up to about 1 to 2 mg/mL;

when said drug is basic, said crystalline highly soluble salt form has an aqueous solubility at least two-fold the solubility of the crystalline hydrochloride salt form; and

said crystalline highly soluble salt form and said hydroxypropylmethyl cellulose acetate succinate are present as particles in a dry physical mixture.

165. (previously presented) The composition of claim 1 or 164 wherein said crystalline highly soluble salt form is selected from the group consisting of the bromide, acetate, iodide, mesylate, phosphate, maleate, citrate, sulfate, tartrate, and lactate salts.

166. (previously presented) The composition of claim 1 or 164 wherein said crystalline highly soluble salt form is selected from the group consisting of the sodium, calcium, potassium, zinc, magnesium, lithium, aluminum, meglumine, diethanolamine, benzathine, choline, and procaine salts.

167. (currently amended) The composition of claim 1 or 164 wherein said drug alone has an aqueous solubility of less than ~~about~~ 0.01 mg/mL at pH 1 to 8.

168. (previously presented) The composition of claim 1 or 164 wherein said drug and said polymer are combined without the use of a solvent.
